OVERVIEW

The alpine coaster is a rail-guided sled ride that follows the natural terrain of a hillside, forest or resort site. Riders control their own speed with the sled's brake levers, so the same track suits both a fast run and a relaxed descent.

Track length, lift and layout are engineered around the site's slope; the ride operates year-round in outdoor conditions.

Designed and manufactured with reference to international amusement-ride standards, EN 13814 in particular. Certification and approval are planned per project for the country of installation.
